

Installing mUzima

Prerequisite

Android Device running OS version of 4.4 (Kitkat) and above.

Alternatively, you may use an android emulator in absence of a physical android device.

mUzima has been tested and guaranteed to work efficiently on android devices running android version 4.4 (Kitkat) and above.

Installation

Presently, mUzima can be installed to a device using **three** methods.

Method 1

Installation through Google Play Store

(This is the safest and recommended installation method)

1. Locate and open Google play store on your android device
2. Touch on the search box and type mUzima
3. You should see the mUzima app among the search results
4. Touch on the app and touch install.
5. Accept the dialog that may pop up and touch install.
6. The mUzima app should now be installed on you device. Congratulations.

Method 2

Downloading directly from the web

1. On your android device, locate setting in the menu.
2. Navigate to security, scroll down to where you have **unknown sources** and make sure it's checked. *(This allows you to install apps to your device from other sources other than Google play store).*
3. Download mUzima by clicking **here** and clicking download.
4. Go to your file manager, locate the file just downloaded and touch on it.
5. Accept the security warning and touch on install.
6. The mUzima app should now be installed on your device. Congratulations.

Method 3

Using adb (Android Debug Bridge)

This is a slightly advance method and recommended only for experienced users.

1. Click **here** to download the mUzima android application.
2. If you used a Unix based operating system(Linux, Mac Os) in your PC, locate the **Terminal** application in the application menu. If you use Windows Operating system, locate the CMD (Command prompt) application in the applications menu.

Note: The Terminal/Command prompt cant be accessed using the following shortcut

*On Unix based PC: **Ctrl + alt + T***

*On Windows PC: **Click start and type CMD***

3. Navigate to the directory the mUzima application was downloaded to (Usually the downloads folder) using the **CD** command
4. Enter the command **./adb install filename.apk** into the terminal, where **filename** is the name of the mUzima app you downloaded.
5. The mUzima app should now be installed on your device. Congratulations.
